CHAPTER 3: CALCULATION OF THE ENERGY CONTENT OF FOODS - ENERGY CONVERSION FACTORS. As stated in Chapter 1, the translation of human energy requirements into recommended intakes of food and the assessment of how well the available food supplies or diets of populations (or even of individuals) satisfy these requirements require knowledge of the amounts of available energy in individual foods.

Public opinion about climate and energy issues is strongly divided along political party and ideological lines.  
This chapter reviews those patterns underlying beliefs about climate change, perceived consensus among  
scientists about climate change, and views about one policy prescription aimed at reducing climate change.

68 Edible insects: future prospects for food and feed security 6.1.1 dietary energy Ramos Elorduy et al. (1997) analysed 78 insect species from Oaxaca state, Mexico, and determined that caloric content was 293–762 kilocalories per 100 g of dry matter. For example, the gross energy (which is normally higher than metabolizable energy) of
