Abstract: We consider an attraction-repulsion chemotaxis model coupled with the Navier-Stokes system. This model describes the interaction between a type of cells (e.g., bacteria), which proliferate following a logistic law, and two chemical signals produced by the cells themselves that degraded at a constant rate.

A Markov chain is a stochastic model describing a sequence of possible events in which the probability of each event depends only on the state attained in the previous event.. In probability theory and related fields, a Markov process, named after the Russian mathematician Andrey Markov, is a stochastic process that satisfies the Markov property (sometimes characterized as "memorylessness").

In computing, Intel's Advanced Programmable Interrupt Controller (APIC) is a family of interrupt controllers. As its name suggests, the APIC is more advanced than Intel's 8259 Programmable Interrupt Controller (PIC), particularly enabling the construction of multiprocessor systems. It is one of several architectural designs intended to solve interrupt routing efficiency issues in multiprocessor ...

Two distinguishable mechanisms of the monoclinic-to-tetragonal transition in VO<sub>2</sub> are identified: an antiferroelectric-to-paraelectric transition at a temperature  $T_t$  as well as a change from homopolar to metallic V-V bonding at a temperature  $T_t$ . In pure VO<sub>2</sub> at atmospheric pressure, the two transitions occur at the same temperature,  $T_t = T_t = 340 \text{ K}$ .

Advanced Nursing Research: From Theory to Practice, Second Edition is a graduate-level text takes a practical approach to preparing research proposals and carrying out research studies. The Second Edition will continue to focus on the conduct of research with an emphasis on the connection to evidence-based practice, quality improvement, and the use of aggregate data.
