320-2.2.6.2, and 320-2.2.6.4 of this document provide additional safety details for electrical distribution systems. 320-1.1.3 DISTRIBUTION SYSTEMS. The distribution system is the vital link connecting the generators that produce electric power to the equipment that uses it. It transmits electric power from the power source to the power user.

Electric power distribution is the final stage in the delivery of electric power; it carries electricity from the transmission system to individual consumers. Distribution substations connect to the transmission system and lower the transmission voltage to medium voltage ranging between 2 kV and 35 kV with the use of transformers. [1]
