Ichthyostega was a fairly large animal, broadly built and about 1.5 m (4.9 ft) long. The skull was flat with dorsally placed eyes and armed with large labyrinthodont teeth. The posterior margin of the skull formed an operculum covering the gills. The spiracle was situated in an otic notch behind each eye.. The limbs were large compared to contemporary relatives, and it had seven digits on each ...

259 BIODIVERSITY AND CONSERVATION combined diversity at all the levels of biological organisation. The most important of them areâ€œ (i) Genetic diversity: A single species might show high diversity at the genetic level over its distributional range.

BIODIVERSITY AND CONSERVATION - National Council of

The largest organisms now found on Earth can be determined according to various aspects of an organism's size, such as: mass, volume, area, length, height, or even genome size. Some organisms group together to form a superorganism (such as ants or bees), but such are not classed as single large organisms. The Great Barrier Reef is the world's largest structure composed of living entities ...

The air-breathing lungs of mammals, including humans, must be dry and empty of fluids to work properly. When we take a breath, tiny air sacs in our lungs pull oxygen out of the air and carry it to our bodies' cells.. The lungs of mammals would not work very well for a fish, because one breath underwater would fill them with fluid and make them useless.
