To make the desired solution, take 20 mL of the 5.0 M stock solution, then add enough water to make 100 mL total volume of solution. (As discussed before, the denominator of molarity is volume of solution; the final volume is determined by measuring the solution, not the amount of solvent added.) Note about the unit M.

Solutions: Dilutions. A. Dilutions: Introduction

A solution that does not contain the maximum amount of solute in it, at a given temperature, is called an unsaturated solution. A solution that contains the maximum amount of solute in it, at a given temperature, is called a saturated solution. Solubility of most solids in water increases as temperature increases.
