Computational Fluid Dynamics (CFD) methods are rapidly gaining popularity for naval architecture, ocean and marine engineering applications. CFD may offer advantages over conducting experiments, or using the potential flow theory, in some aspects, provided that the Navier-Stokes equations can be solved accurately.

The branch of Engineering Mechanics dealing with the motion of bodies is called as Dynamics and the other branch is called as Statics, in which we study balance and equilibrium of bodies. Throughout the study of Engineering Mechanics the principles of three Newton's Laws of Motion are used invariably.
