

### **protective relays application guide pdf**

The relays covered by this guide are listed in Table 1 and are all designed to operate at normal rated voltage to detect reverse power or overpower conditions on a power system. All of these relays with the exception of the ICW51B are suitable for application on three-phase systems only.

Protective relays using electrical quantities are connected to the power system through current transformer (CT) or voltage transformer (VT). These input devices or instrument transformers provide insulation from the high-power system voltages and reduce the magnitudes to practical secondary levels for the relays.
