Serge Lang (French: ; May 19, 1927 – September 12, 2005) was a French-American mathematician and activist. He is known for his work in number theory and for his mathematics textbooks, including the influential Algebra. He was a member of the Bourbaki group. At the time of his death he was professor emeritus of mathematics at Yale University

Until 19th century, linear algebra was introduced through systems of linear equations and matrices. In modern mathematics, the presentation through vector spaces is generally preferred, since it is more synthetic, more general (not limited to the finite-dimensional case), and conceptually simpler, although more abstract.. A vector space over a field  $F$  (often the field of the real numbers) is a ...

L'algebra lineare è la branca della matematica che si occupa dello studio dei vettori, spazi vettoriali (o spazi lineari), trasformazioni lineari e sistemi di equazioni lineari. Gli spazi vettoriali sono un tema centrale nella matematica moderna; l'algebra lineare è usata ampiamente nell'algebra astratta, nella geometria e nell'analisi funzionale. L'algebra lineare ha inoltre una ...

This book introduces the tools of modern differential geometry--exterior calculus, manifolds, vector bundles, connections--and covers both classical surface theory, the modern theory of connections, and curvature.

In matematica, in particolare in algebra lineare, un autovettore di una funzione tra spazi vettoriali è un vettore non nullo la cui immagine è il vettore stesso moltiplicato per un numero (reale o complesso) detto autovalore. Se la funzione è lineare, gli autovettori aventi in comune lo stesso autovalore, insieme con il vettore nullo, formano uno spazio vettoriale, detto autospazio.
