This is the second Blog on High Power Pulsed Magnetron Sputtering (HPPMS) process and coatings. Recall from the last Blog that high-power pulsed magnetron sputtering (HPPMS), also known as high-power impulse magnetron sputtering (HIPIMS) is a PVD method based on magnetron sputter deposition.

Powder Coating is the only technical publication devoted to the powder coating industry and other green finishing technologies. Articles provide up-to-date information about the powder coating process, including surface preparation, materials handling, powder coatings, raw materials, application and recovery equipment, curing equipment, and powder coatings manufacturing equipment.

In materials science, the sol-gel process is a method for producing solid materials from small molecules. The method is used for the fabrication of metal oxides, especially the oxides of silicon (Si) and titanium (Ti). The process involves conversion of monomers into a colloidal solution that acts as the precursor for an integrated network (or gel) of either discrete particles or network ...

Microencapsulation is a process in which tiny particles or droplets are surrounded by a coating to give small capsules, of many useful properties. In general, it is used to incorporate food ingredients, enzymes, cells or other materials on a micro metric scale. Microencapsulation can also be used to enclose solids, liquids, or gases inside a micrometric wall made of hard or soft soluble film ...

1. Introduction. Chromate conversion coatings are widely used as protective coatings for high-strength aluminium alloys, such as AA 2024-T3, which are susceptible to pitting corrosion , .However, due to the toxicity and high disposal costs of Cr(VI) compounds, alternative treatments are being sought, amongst which trivalent chromium conversion (TCC) coatings are considered promising , , .
