A quantitative trait locus (QTL) is a locus (section of DNA) which correlates with variation of a quantitative trait in the phenotype of a population of organisms. QTLs are mapped by identifying which molecular markers (such as SNPs or AFLPs) correlate with an observed trait. This is often an early step in identifying and sequencing the actual genes that cause the trait variation.

Quantitative trait locus - Wikipedia

Levene's test was insignificant as p=0.959, indicating the variances are approximately equal. The independent t test result gave the t statistic as 1.982, and the two-tailed value of p as 0.048 (<0.05).

Employee Engagement as a Predictor of Seafarer Retention

A geographic information system (GIS) is a system designed to capture, store, manipulate, analyze, manage, and present spatial or geographic data.GIS applications are tools that allow users to create interactive queries (user-created searches), analyze spatial information, edit data in maps, and present the results of all these operations.
