The Standard Template Library (STL) is a software library for the C++ programming language that influenced many parts of the C++ Standard Library. It provides four components called algorithms, containers, functions, and iterators.. The STL provides a set of common classes for C++, such as containers and associative arrays, that can be used with any built-in type and with any user-defined type ...

Last update: 10th May 2013. Fixed a mistake in handling reflection case. Finding the optimal/best rotation and translation between two sets of corresponding 3D point data, so that they are aligned/registered, is a common problem I come across. An illustration of the problem is shown below for the simplest case of 3 corresponding points (the minimum required points to solve).

Finding optimal rotation and translation between

XML Schema 1.1 Status. XML Schema 1.1 (in two parts) is a W3C Recommendation. It is intended to be mostly compatible with XML Schema 1.0 and to have approximately the same scope, but also to fix bugs and make whatever improvements we can, consistent with the constraints on scope and compatibility.

XML Schema - World Wide Web Consortium (W3C)

The new database automatically opens when it's created. Then you can insert new info items in the outline tree view by selecting the [Organize - New child item] or [New sibling ...] menu items.
