Motion capture data is then used to enhance the animation. Detail is added to degrees of freedom that were keyframed, a process we call texturing. Degrees of freedom that were not keyframed are synthesized.

A time consuming process, mainly used for human motion, it was the first time a real-life performance was used to help create an animated character. The first cartoon character to be rotoscoped was Koko the Clown. It was later used by Walt Disney, in 1937, to get realistic human motion for Snow White and the Prince.

for motion tracking and capture in 3D animation and in particular that of hand motion tracking and capture. HandPuppet3D aims to enable gesture capture with interpretation of the captured gestures and control of the target 3D animation software. This involves development and testing of a motion analysis system built from algorithms recently developed.

Motion tracking or motion capture started as a photogrammetric analysis tool in biomechanics research in the 1970s and 1980s, and expanded into education, training, sports and recently computer animation for television, cinema, and video games as the technology matured. Since the 20th century the performer has to wear markers near each joint to identify the motion by the positions or angles between the markers.
